

Directorate of Intelligence
Office of Information Resources

1 December 1986

NOTE TO: D/OIT

Do you want all requirements delivered to OIT in this manner? It might be easier to handle ones like the attached at the division/group level. We, however, will follow whatever process you prefer. Let me know. Thanks.

D/OIR

I would prefer them at the Office level until I can get my arms around our requirements process. ~~Thanks~~

MEMORANDUM FOR: Director of Information Technology, DA

FROM:

[Redacted]

STAT

Director of Information Resources, DI

SUBJECT:

DI Requirement to Run TACK Concurrently With NOMAD and SQL
on the IBM 3270 PC/ATs

[Redacted]

STAT

1. This memorandum documents a DI requirement enabling concurrent use of TACK with NOMAD and with SQL on the IBM 3270 PC/AT.

2. On 13 November 1986, [Redacted] OIT/NSEG, briefed the DI ADP Advisory Group on the problems of concurrently running TACK with other program products on the IBM 3270 PC/AT. The issue was raised in an effort to determine the DI's requirements for concurrent use of TACK with other program products.

STAT

3. On the average, the [Redacted] At present, most DI TACK applications run concurrently with NOMAD data bases on Ramtek or Tektronix graphics stations. The DI anticipates that when the PBX is installed to run the 3270 PCs, the demand for locally available mainframe graphics will increase significantly. It will be especially critical that DI analysts have the capability to run TACK concurrently with NOMAD and SQL.
